ActivityManager Don't Like Twins

Posted by Alejandro G. Carlstein Ramos Mejia on July 28, 2011 July 28, 2011 About Programming / Android

If you cross yourself with the following warning:
WARN/ActivityManager(78): Duplicate finish request for HistoryRecord

There is a chance that your application finish braking down.
This may occur when you write twice the method *finish()*.

It seems that ActivityManager even do provide a warning, its die of a heart-attack when see the twins brothers of the method finish().

```
@Override
public void onItemClick(AdapterView<?> parent, View v, int position, long id) {
    Log.d(TAG, 'onItemClick()');
    ...
    finish();
    ...
    finish();
}
```

So make sure you are not calling *finish()* once and later calling *finish()* again. Plus one *finish()* is more than enough.
